Software Engineer

SUMMARY

Software Engineer and Computer Science graduate with experience building and supporting production web applications. Skilled in debugging systems, working with APIs, and analyzing data using SQL and modern web technologies. Experienced in full-stack development with React, Node.js, Python, and PostgreSQL, focusing on data processing, system reliability, and troubleshooting application behavior across frontend and backend systems.

TECHNICAL SKILLS

Languages: Python, TypeScript, JavaScript, SQL, Java, C++, Bash
Frameworks & Libraries: React, Node.js, Flask, Express, Next.js, Tailwind CSS
Databases & Tools: PostgreSQL, MongoDB, Supabase, Git, Docker, Linux, Tableau, Excel
Concepts: REST APIs, Data Modeling, Debugging, Authentication (JWT/OAuth), API Integration, System Design Fundamentals

EXPERIENCE

Frontend Developer — Jan 2025 - May 2025

MicoByte Software — Kanji Gator (Japanese Learning Platform) — Newark, NJ

- Developed frontend features for a Japanese language learning platform, implementing interactive kanji input workflows with real-time feedback.
- Built responsive UI components using React and Tailwind CSS, focusing on usability, input handling, and smooth user interactions.
- Integrated frontend functionality with Flask-based APIs to support session state, user input processing, and progress tracking.
- Collaborated within an 11-person engineering team using Git workflows, contributing to feature development, code integration, and cross-functional coordination across frontend and backend components in a shared codebase.

Operations & Logistics Assistant — May 2023 - Jan 2025

Good Tidings Plumbing Heating Cooling — Clark, NJ

- Coordinated daily logistics for an 8-person warehouse team, ensuring materials and equipment met scheduled project demands.
- Maintained and audited digital inventory systems for real-time tracking and error reduction.
- Used spreadsheets and internal tracking tools to manage workflows, improving team communication and efficiency.

PROJECTS

- **GiftPerch (giftperch.com) — AI-Powered Gifting Workspace | Full Stack Developer | Fall 2025**
  - Built a Next.js + Supabase platform generating personalized gift recommendations from reusable recipient profiles.
  - Designed REST APIs and database schemas to manage users, profiles, budgets, and gift history.
  - Implemented feedback loops (saved, liked, disliked items) to improve future recommendations and avoid repeats.
  - Delivered a responsive dashboard, occasions calendar, and PerchPal chat workflow with production-ready UI components.
- **Applictus (applictus.com) — Automated Job Application Tracker | Full-Stack Developer | Winter 2026**
  - Built a production web application that integrates with Gmail via OAuth to automatically detect, classify, and track job application updates.
  - Designed and implemented an email ingestion pipeline to parse messages, deduplicate events, and infer application lifecycle states.
  - Implemented secure authentication, session management, and encrypted OAuth token handling using Supabase and Google OAuth.
  - Delivered a responsive dashboard with application pipelines, timelines, sync status, and user-managed account integrations.
- **StateStats (statestats.us) — U.S. State-Level Data Explorer | Full Stack Developer | Fall 2025**
  - Built an interactive data platform visualizing state-level economic and workforce metrics with choropleth maps and time-series charts.
  - Designed a Prisma + PostgreSQL ingestion pipeline enabling efficient querying and cross-state, time-based comparisons.
  - Implemented dynamic visualizations with D3.js and responsive UI components using Next.js, React, and Tailwind.
  - Deployed a production-ready analytics dashboard with clean UX for filtering, comparisons, and metric drill-downs.

EDUCATION

NJIT - New Jersey Institute of Technology, Newark, NJ — May 2025

Bachelor of Science in Computer Science

ACTIVITIES

- **Volunteer Tutor — NJIT Coding & Tech Tutoring | Spring 2023**
  - Tutored students in Python, Java, and C++, focusing on debugging, algorithms, and software design fundamentals.
- **Member — NJIT Information & Cybersecurity Club | 2022-2023**
  - Completed applied security and ethical-hacking labs, including CTF challenges focused on network defense and vulnerability testing.
