Software Engineer

SUMMARY

Software Engineer and Computer Science graduate focused on building and supporting production web applications. Experienced in API design, system debugging, and data-driven features across full-stack environments. Strong background in React, Node.js, Python, and PostgreSQL, with an emphasis on scalable system design, reliable data processing, and troubleshooting complex application behavior.

TECHNICAL SKILLS

Languages: Python, TypeScript, JavaScript, SQL, Java, C++, Bash

Frameworks & Libraries: React, Node.js, Flask, Express, Next.js, Tailwind CSS

Databases & Tools: PostgreSQL, MongoDB, Supabase, Git, Docker, Linux, Tableau, Excel

Concepts: REST APIs, Data Modeling, Authentication (JWT/OAuth), API Integration, System Design Fundamentals

ENGINEERING PROJECTS

Applictus (applictus.com) — Automated Job Application Tracker **Jan 2026 – Present**

- Developed a production application that ingests and classifies job-related emails using OAuth and server-side parsing
- Built an event-processing pipeline to deduplicate updates and infer application lifecycle states
- Implemented secure authentication and session management with encrypted OAuth token handling

GiftPerch (giftperch.com) — AI-Powered Gifting Platform **Sep 2025 – Present**

- Designed REST APIs and database schemas to manage users, profiles, budgets, and gift history.
- Implemented feedback loops (saved, liked, disliked items) to improve future recommendations and avoid repeats.
- Delivered a responsive dashboard, occasions calendar, and PerchPal chat workflow with production-ready UI components.

StateStats (statestats.us) — U.S. State-Level Data Explorer **May 2025 – Aug 2025**

- Designed a Prisma + PostgreSQL ingestion pipeline enabling efficient querying and cross-state, time-based comparisons.
- Implemented dynamic visualizations with D3.js and responsive UI components using Next.js, React, and Tailwind.
- Deployed a production-ready analytics dashboard with clean UX for filtering, comparisons, and metric drill-downs.

EXPERIENCE

Software Developer Jan 2025 – May 2025

MicoByte Software — Kanji Gator (Japanese Learning Platform) Newark, NJ

- Developed responsive frontend features for a language learning platform using React and Tailwind CSS.
- Integrated UI components with Flask APIs to support real-time input handling and progress tracking.
- Collaborated in an 11-person team using Git workflows across a shared full-stack codebase.

Technical Tutor Sep 2024 – Dec 2024

NJIT Coding & Tech Tutoring Newark, NJ

- Tutored students in Python, Java, and C++, focusing on debugging, algorithms, and core programming concepts.
- Helped students diagnose and resolve logic errors, improving problem-solving and code comprehension.

Member Sep 2022 – May 2023

NJIT Information & Cybersecurity Club Newark, NJ

- Completed hands-on security labs and CTF challenges focused on network defense and vulnerability analysis.

Operations & Logistics Assistant May 2023 – Jan 2025

Good Tidings Plumbing Heating Cooling Clark, NJ

- Coordinated logistics and maintained inventory systems supporting an 8-person operations team.

EDUCATION

New Jersey Institute of Technology Newark, NJ

Bachelor of Science in Computer Science May 2025
