Software Engineer

SUMMARY

Software Engineer and Computer Science graduate focused on building and supporting production web applications. Experienced in API design, system debugging, and data-driven features across full-stack environments. Strong background in React, Node.js, Python, and PostgreSQL, with an emphasis on scalable system design, reliable data processing, and troubleshooting complex application behavior.

TECHNICAL SKILLS

Languages: Python, TypeScript, JavaScript, SQL, Java, C++, Bash

Frameworks & Libraries: React, Node.js, Flask, Express, Next.js, Tailwind CSS

Databases & Tools: PostgreSQL, MongoDB, Supabase, Git, Docker, Linux, Tableau, Excel

Concepts: REST APIs, Data Modeling, Authentication (JWT/OAuth), API Integration, System Design Fundamentals

EXPERIENCE

Software Developer — Jan 2025 - May 2025

MicoByte Software — Kanji Gator (Japanese Learning Platform) — Newark, NJ

- Developed responsive frontend features for a language learning platform using React and Tailwind CSS.
- Integrated UI components with Flask APIs to support real-time input handling and progress tracking.
- Collaborated in an 11-person team using Git workflows across a shared full-stack codebase.

Technical Tutor — Sep 2024 - Dec 2024

NJIT Coding & Tech Tutoring — Newark, NJ

- Tutored students in Python, Java, and C++, focusing on debugging, algorithms, and core programming concepts.
- Helped students diagnose and resolve logic errors, improving problem-solving and code comprehension.

Member — Sep 2022 - May 2023

NJIT Information & Cybersecurity Club — Newark, NJ

- Completed hands-on security labs and CTF challenges focused on network defense and vulnerability analysis.

Operations & Logistics Assistant — May 2023 - Jan 2025

Good Tidings Plumbing Heating Cooling — Clark, NJ

- Coordinated logistics and maintained inventory systems supporting an 8-person operations team.

PROJECTS

GiftPerch (giftperch.com) — AI-Powered Gifting Platform

- Designed REST APIs and database schemas to manage users, profiles, budgets, and gift history.
- Implemented feedback loops (saved, liked, disliked items) to improve future recommendations and avoid repeats.
- Delivered a responsive dashboard, occasions calendar, and PerchPal chat workflow with production-ready UI components.

Applictus (applictus.com) — Automated Job Application Tracker

- Developed a production application that ingests and classifies job-related emails using OAuth and server-side parsing
- Built an event-processing pipeline to deduplicate updates and infer application lifecycle states
- Implemented secure authentication and session management with encrypted OAuth token handling

StateStats (statestats.us) — U.S. State-Level Data Explorer

- Designed a Prisma + PostgreSQL ingestion pipeline enabling efficient querying and cross-state, time-based comparisons.
- Implemented dynamic visualizations with D3.js and responsive UI components using Next.js, React, and Tailwind.
- Deployed a production-ready analytics dashboard with clean UX for filtering, comparisons, and metric drill-downs.

EDUCATION

Bachelor of Science in Computer Science — Sep 2019 - May 2025

New Jersey Institute of Technology — Newark, NJ
