Software Engineer

SUMMARY

Software Engineer and Computer Science graduate focused on building and supporting production web applications. Experienced in API design, system debugging, and data-driven features across full-stack environments. Strong background in React, Node.js, Python, and PostgreSQL, with an emphasis on scalable system design, reliable data processing, and troubleshooting complex application behavior.

TECHNICAL SKILLS

Languages: Python, TypeScript, JavaScript, SQL, Java, C++, Bash, PHP

Frameworks & Libraries: React, Node.js, Flask, Express, Next.js, Tailwind CSS

Databases & Tools: PostgreSQL, MongoDB, Supabase, Git, Docker, Linux, Tableau, Excel

Concepts: REST APIs, Data Modeling, Authentication (JWT/OAuth), API Integration, System Design Fundamentals

ENGINEERING PROJECTS

Applictus (applictus.com) — Automated Job Application Tracker **Jan 2026 – Present**

- Built and deployed a web application that ingests and classifies job-related emails using OAuth and server-side parsing
- Developed an event-processing pipeline to deduplicate updates, infer application lifecycle states, and manage authentication with encrypted token handling
- Implemented a user-facing dashboard to track application timelines, statuses, and email-driven updates

GiftPerch (giftperch.com) — AI-Powered Gifting Platform **Sep 2025 – Present**

- Designed REST APIs and database schemas to manage users, profiles, budgets, and gift history
- Built core product features including feedback loops (saved, liked, disliked items), an occasions calendar, and a responsive dashboard with integrated AI chat workflow
- Integrated OpenAI APIs to generate personalized gift recommendations based on recipient profiles, user input, and gift history

StateStats (statestats.us) — U.S. State-Level Data Explorer **May 2025 – Aug 2025**

- Designed a Prisma + PostgreSQL ingestion pipeline enabling efficient querying and cross-state, time-based comparisons
- Implemented dynamic visualizations with D3.js and responsive UI components using Next.js, React, and Tailwind
- Deployed a production-ready analytics dashboard with clean UX for filtering, comparisons, and metric drill-downs

EXPERIENCE

Software Engineer May 2025 – Present

Self-Directed

- Built and deployed multiple full-stack web applications, including a job application tracker, AI-powered gifting platform, and state-level data explorer, integrating APIs, authentication, and data processing
- Developed backend logic for parsing data, deduplicating events, and managing application workflows
- Built features across both frontend and backend, delivering complete end-to-end functionality

Software Developer Jan 2025 – May 2025

MicoByte Software — Kanji Gator (Japanese Learning Platform) Newark, NJ

- Developed responsive frontend features using React and Tailwind CSS and integrating them with Flask APIs to support real-time input handling and progress tracking
- Collaborated in an 11-person team using Git workflows across a shared full-stack codebase, working closely with backend components to ensure seamless data flow and accurate synchronization between frontend state and backend responses

Operations & Logistics Assistant May 2023 – Jan 2025

Good Tidings Plumbing Heating Cooling Clark, NJ

- Coordinated logistics and maintained inventory systems supporting an 8-person operations team, ensuring materials and equipment were available for scheduled jobs

EDUCATION

New Jersey Institute of Technology Newark, NJ

Bachelor of Science in Computer Science May 2025
